

Buying renewable certificates across Asia-Pacific under SBTi and RE100

Canonical:

<https://northmoregordon.com/news/buying-renewable-certificates-across-asia-pacific-under-sbti-and-re100/>

Details:

Northmore Gordon is hosting a webinar for corporate buyers who procure renewable electricity certificates across Asia-Pacific. The session will examine how certificate supply, prices and rules differ across Australia, New Zealand, Singapore, Malaysia, Vietnam, Taiwan and Korea, and what those differences mean for a buyer trying to make a consistent claim across several markets.

When: Wednesday 11 November 2026, 1:00 pm AEDT. The original event notice also lists 10:00 am in Singapore, Malaysia and Taiwan, 11:00 am in Korea, and 3:00 pm in New Zealand. Check the time shown on the registration page for your own location and daylight-saving setting.

Register: Northmore Gordon's webinar registration page .

What the session will cover

Differences in supply, pricing and scheme rules across the seven markets.

Changes to SBTi and RE100 requirements discussed by the presenters, plus forthcoming developments.

How certificates can support Scope 2 and climate reporting, and where a certificate alone does not establish a claim.

The meaning of hourly matching for corporate electricity buyers.

Procurement mistakes seen in cross-market purchasing.

Northmore Gordon says its trading desk sources and manages certificates across APAC markets. The webinar is intended to focus on how those markets behave in practice. The source announcement does not publish a country-by-country eligibility table or prices, so buyers should not treat this event notice as a procurement rulebook.

Before you register

Bring the list of markets where your business consumes electricity, the reporting period and the exact claim you want to support. Record whether the purchase is for a renewable electricity claim, market-based Scope 2 reporting, or another target. These questions will help you test what evidence you need from a certificate issuer, registry or supplier rather than assuming one instrument can be used the same way in every country.

Northmore Gordon also offers an APAC Renewable Certificate Buyer's Guide after the webinar. Use the event registration page for the live session, or contact Northmore Gordon about the guide.

When is the webinar?

Wednesday 11 November 2026 at 1:00 pm AEDT. The event page also lists 10:00 am for Singapore, Malaysia and Taiwan, 11:00 am for Korea, and 3:00 pm for New Zealand; confirm your local time on the registration page.

Which markets will the session discuss?

Australia, New Zealand, Singapore, Malaysia, Vietnam, Taiwan and Korea.

What topics are on the agenda?

Certificate supply, pricing and rules; SBTi and RE100 changes; Scope 2 reporting; hourly matching; and common procurement mistakes across Asian markets.

Does this announcement tell buyers which certificate is eligible in each market?

No. It announces a session about those differences but does not provide a country-by-country eligibility decision. Check the applicable scheme, framework and registry evidence before purchasing.

Where can I register?

Use the webinar's registration page linked above. Northmore Gordon's original article also mentions a separate form for a post-webinar buyer's guide.
