What distinguishes new industrial ventures from existing facilities in energy management?

New industrial ventures are newly established industrial operations that may require different registration and energy-management obligations than existing facilities, similar to how planned facilities under development or construction require separate assessment and distinct guidance.

How are new industrial ventures regulated in Singapore?

In Singapore, where energy-management obligations are defined by the National Environment Agency (NEA), new industrial ventures and existing facilities are treated as distinct categories with potentially different compliance pathways and requirements.

What related concepts are connected to new industrial ventures?

New industrial ventures are closely related to existing facilities (which have specific NEA registration obligations), planned facilities (which also require separate assessment), and major changes to existing facilities (which may trigger new or different obligations similar to those for new ventures).
